I just read on [linuX-Gamers](#) that S2 Games have decided to make Savage free! This is undoubtedly to generate interest in the upcoming release of Savage 2, but it's still great news. Now you have no excuse not to take it for a spin. You can only get the windows client from the Savage home page, but [linuX gamers](#) linked directly to the Linux files. I'm reproducing those links below.

Download Savage Linux client ==> [savage_linux.sh.gz](#) Download Savage 2.0c patch ==> [savage_2.00c-english.update.run](#) Download SEP2F Savge Mod ==> [SEP2F mod](#) (needed to actually connect and play on online servers) And finally See the Thread in the [Linux-gamers.net](#) forums with information for Savage on Linux UPDATE 2006-09-06: S2 Games have added linux links / instructions to their download page
